DETAILED ACTION

Allowable Subject Matter

1. Claims 1-17 are allowed over the prior art.
2. The following is an examiner's statement of reasons for allowance: regarding claim 1, the primary reason for the allowance of the claim is due to a method for verifying frequency of a clock signal having a step of calculating a period deviation range T_e of the clock signal when a bi-level divided clock signal is detected to be a first level from the first to a $(p-q)$ th detected points but a second level at the $(p+1)$ th detected point. Since claims 2-12 depend from claim 1, they also have allowable subjected matter.

Regarding claim 13, the primary reason for the allowance of the claim is due to a device for verifying frequency of a clock signal comprising a comparative detector in communication with said frequency divider and said reference signal generator, detecting a level of said bi-level divided clock signal in response to said reset signal and said reference clock signal, and verifying frequency of said clock signal according to a period deviation range T_e when said bi-level divided clock signal is detected to be a first level from the first to the $(p-q)$ th detected points but a second level at the $(p+1)$ th detected point. Since claims 14-17 depend from claim 13, they also have allowable subjected matter.

The closes prior art to the claimed invention is Watanabe et al (6522122). However, they do not disclose the above limitation and it would not be obvious to combine another reference with Watanabe et al to achieve the claimed invention.
